

Results of eAWARE Pupil Premium survey November 21– July 22

Result from November 2021

Result from July 2022

November 2021 eAWARE Pupil Premium data

Across the school from Y1-Y6 we monitored Pupil Premium children in relation to e-safety.

Out of this 54% of children demonstrated a poor understanding of the online risks they may encounter.

43% of children demonstrated a level of vulnerability. They have some understanding of the dangers which can be found online but overall require further understanding of the online risks posed to them.

3% of children demonstrated competency and have a good knowledge of the online challenges they may face. However, these challenges and risks are constantly evolving.

July 2022 eAWARE Pupil Premium data

The same children were then monitored again in relation to e-safety.

Out of this, 20% of children demonstrated a poor understanding of the online risks their children may encounter.

40% of children demonstrated a level of vulnerability. They have some understanding of the dangers which can be found online but overall require further understanding of the online risks posed to their children.

40% of children demonstrated competency and have a good knowledge of the online challenges their children may face. However, these challenges and risks are constantly evolving.

This data demonstrates that the use of the eAWARE with Pupil Premium children has significantly reduced the risk status by 37%.
